- **Porifera** (Latin, *Phorus = pori-pori, ferre = pembawa*) adalah hewan invertebrata yang mempunyai tubuh berpori-pori.
- Bentuk tubuh hewan ini tidak hanya kotak, tapi bermacam macam. Ada yang seperti piala, terompet, dan ada yang bercabang menyerupai tumbuhan. Struktur tubuhnya **radial simetris**.
- Ciri utama memiliki **lubang (Pori)** yang banyak

## Porifera - Skeleton , Canal System & Reproduction

**ABSTRAK**

Porifera adalah hewan air yang hidup di laut. Kelompok ini memiliki struktur pada subunit reseptor dan tidak dapat bergerak tempat secara bebas. Sebagian besar kelompok di laut, sebagian kecil di air tawar. Berdasarkan ciri-ciri anatominya porifera memiliki tiga tipe saluran yaitu: Asconoid, Syconoid, Leuconoid. Berdasarkan jenis saluran dalam tubuh, porifera dibagi menjadi 3 kelas, diantaranya adalah Kelas Cubozoa, Kelas Hexactinellida, dan Kelas Demospongia. Dari hasil hasil dan penelitian banyak manfaat yang dihasilkan dari kelas porifera ini, baik itu bagi ekonomis maupun bagi manusia. Adapun tujuan dari praktikum ini adalah untuk mempelajari bentuk dan struktur tubuh porifera. Tujuan yang diarahkan pada praktikum ini adalah mempelajari anatomi, morfologi kelas Demospongia dengan bahan dasar objek diantarnya yaitu spongia, spog agar press, dan serta kelengkapan.
